The FRR-consortium

The Partners

Delft University of Technology (TUD),
 The Netherlands

Coordinator of the FRR project

Johan Molenbroek

Renate de Bruin

Sonja Buzink

Dries Dekker

Erik Huijs

Diederik van der Pant

Why TU Delft had interest in coordinating the FRR-project

- 35 years experience with developing products for elderly and handicapped, with ergonomics, anthropometry and product safety
- Experience with ethnographic research into intimate matters like toileting
- Availability of technical-, medical-, business and social-disciplines within the faculty
- IDE philosophy is User centred Research and Design; slogan: 'creating products for people'
- IDE-designers learn in a 5 years curriculum to translate the research output into innovative product characteristics

Fortec

Research Group on Rehabilitation Technology,
Austria

fortec develops innovative concepts and technical (mainly software and microprocessor based) aids to overcome existing barriers in the life of old people and persons with a disability

Staff: 7 assistive technology and universal design researchers plus support personnel

Fortec belongs to the Institute “integrated study” at Vienna University of Technology

Fortec's team and
main tasks in FRR
project

Responsible for technical activities of test site in
Vienna

Development of FRR System Software and Interface
Software (together with Certec, Sweden)

Ethical Peer Review in FRR

Vienna University of Technology

Marjo Rauhala

Ina Wagner

Certec, Lund
University, Sweden

- It is necessary to study real people with real objects in real situations in real time.
- Research on the dynamics in FRR is very complex and requires competence from different fields of knowledge.
- You cannot know until you have tried.

Design for Everyday Life

- Certec has more than 15 years experience of participatory design for everyday life.
- The experiences from the design process in the FRR project will be utilized in other ongoing and coming projects for elderly and people with disabilities.
- The deep engagement and involvement of test persons and User-board in FRR has clearly demonstrated the importance of this project.
- The design of a friendly restroom for and together with fragile elderly persons calls for research methods that take into consideration their weaknesses. That put a demand on researchers flexibility and sensitivity.

EURAG – European Federation of Older Persons, Austria

- non-profit and non-religious European organisation
- founded in 1962 with seat in Luxemburg
- independent of political parties
- since 1974 the EURAG General Secretariat is in Graz/Austria
- through its member organizations, EURAG represents millions of older people from 33 European countries
- its purpose is to promote elderly people's quality of life on societal, social and political levels
